

Microsoft Dynamics 365 Business Central Integration Checklist

Microsoft Dynamics 365 Business Central can be integrated with nearly any Microsoft application, and most third-party applications. The following checklist will help to ensure you don't miss a step when evaluating your future integration project:

- Is your third-party application a Microsoft product?
- Is your third-party application a SaaS product?
- Is your third-party application hosted on premise?
- Is the third-party application SQL-based?
- Does your third-party application have an Application Programming Interface (API)?
- Do you have access to the data stored in your third-party application?
- Does your third-party application export or import data files?
- Does your third-party application fulfill a business process that your accounting software system does not?
- Do you know the current version of your third-party application?
- Do you know about the software upgrade process for your third-party application?
- Does your third-party application include a support plan?

You have now completed your due diligence. Tidestone Solutions is ready to help with the heavy lifting to bring your integration project to life! Contact us today to schedule your next project.
